Int 21H, AH=36H

Version

2 and higher

Brief

GET FREE DISK SPACE

Family API

Input

```
AH = 36h
DL = drive number (00h = default, 01h = A:, etc)
```

Return

AX = FFFFh if invalid drive

```
else
  AX = sectors per cluster
  BX = number of free clusters
  CX = bytes per sector
  DX = total clusters on drive
```

Notes

```
free space on drive in bytes is AX * BX * CX
total space on drive in bytes is AX * CX * DX
"lost clusters" are considered to be in use
```

according to Dave Williams' MS-DOS reference, the value in DX is incorrect for non-default drives after ASSIGN is run
 this function does not return proper results on CD-ROMs;
 use AX=4402h"CD-ROM" instead
 (FAT32 drive) the reported total and free space are limited to 2G-32K
 should they exceed that value
