

Note: This API call is for DOS and Win16 personality only. Use [Family API](#) for portability.

2018/09/07 05:04 · prokushev · [0 Comments](#)

Int 21H, AH=3DH

Version

2 and higher

Brief

“OPEN” - OPEN EXISTING FILE

Family API

Input

```
AH = 3Dh
AL = access and sharing modes (see #01402)
DS:DX -> ASCIZ filename
CL = attribute mask of files to look for (server call only)
```

Return

CF clear if successful

```
AX = file handle
CF set on error
AX = error code (01h,02h,03h,04h,05h,0Ch,56h) (see #01680 at
AH=59h)
```

Notes

Notes: file pointer is set to start of file

if SHARE or a network is loaded, the file open may fail if the file is already open, depending on the combination of sharing modes (see #01403,#01404)
file handles which are inherited from a parent also inherit sharing and access restrictions
files may be opened even if given the hidden or system attributes under the FlashTek X-32 DOS extender, the pointer is in DS:EDX
DR DOS checks the system password or explicitly supplied password at the end of the filename (following a semicolon) against the reserved field in the directory entry before allowing access
sharing modes are only effective on local drives if SHARE is loaded

BUG: Novell DOS 7 SHARE v1.00 would refuse file access in the cases in

#01403 marked with [1] (read-only open of a read-only file which had previously been opened in compatibility mode); this was fixed in SHARE v1.01 of 09/29/94

Bitfields for access and sharing modes: Bit(s) Description (Table 01402) 2-0 access mode

000 read only
001 write only
010 read/write
011 (DOS 5+ internal) passed to redirector on EXEC to allow case-sensitive filenames

3 reserved (0) 6-4 sharing mode (DOS 3.0+) (see #01403)

000 compatibility mode
001 "DENYALL" prohibit both read and write access by others
010 "DENYWRITE" prohibit write access by others
011 "DENYREAD" prohibit read access by others
100 "DENYNONE" allow full access by others
111 network FCB (only available during server call)

7 inheritance

if set, file is private to current process and will not be inherited by child processes

(Table 01403) Values of DOS 2-6.22 file sharing behavior:

| Second and subsequent Opens

First |Compat Deny Deny Deny Deny Open | All Write Read None

| R W RW R W RW R W RW R W RW R W RW

-----|----- Compat R |Y Y N N N 1 N N N N 1 N N
