# Int 21H, AH=63H, AL=02H

## Version

2.25, 3.2 and higher

## Brief

GET KOREAN (HANGEUL) INPUT MODE

## Family API

## Input

```
AX = 6302h
```

## Return

```
AL = status
    00h successful
DL = current input mode
    00h return only full characters (clears interim flag)
    01h return partial characters (sets interim flag)
    FFh not supported
```

## Macro

## Notes

```
Novell DOS 7 simply reads the value out of the caller's PSP, so it can
return values other than 00h or 01h if the last call to AX=6301h used
```

another value. The US version of MS-DOS 3.30 treats this as an unused function, setting AL=00h and returning immediately, WITHOUT setting DL; only the Far East versions of MS-DOS 3.2 and 3.3 supported this call

## See also

AH=07h - AH=08h - AH=0Bh - AX=6300h

## Note
