

This is part of **Family API** which allow to create dual-os version of program runs under OS/2 and DOS

**Note:** This is legacy API call. It is recommended to use 32-bit equivalent

2021/09/17 04:47 · prokushev · [0 Comments](#)

# DosMkDir

This call creates a subdirectory.

## Syntax

```
DosMkDir (DirName, Reserved)
```

## Parameters

- DirName (PSZ) - input : Address of the ASCIIZ directory path name, which may or may not include a drive specification. If no drive is specified, the current drive is assumed.

:DosQSysInfo is called by an application during initialization to determine the maximum path length allowed by OS/2.

- Reserved (ULONG) - input : Reserved and must be set to zero.

## Return Code

```
rc (USHORT) - return
```

Return code descriptions are:

- 0 NO\_ERROR
- 3 ERROR\_PATH\_NOT\_FOUND
- 5 ERROR\_ACCESS\_DENIED
- 26 ERROR\_NOT\_DOS\_DISK
- 87 ERROR\_INVALID\_PARAMETER
- 108 ERROR\_DRIVE\_LOCKED
- 206 ERROR\_FILENAME\_EXCED\_RANGE

## Remarks

If any subdirectory names in the path do not exist, the subdirectory is not created. Upon return, a

subdirectory is created at the end of the specified path.

DosQSysInfo must be used by an application to determine the maximum path length supported by OS/2. The returned value should be used to dynamically allocate buffers that are to be used to store paths.

If a program running with the NEWFILES bit set tries to create a directory with blanks immediately preceding the dot on a FAT drive, the system rejects the name. For example, if c: is a FAT drive, the name "file .txt" is rejected and the name "file.txt" is accepted.

### Example Code

## C Binding

```
#define INCL_DOSFILEMGR

USHORT rc = DosMkDir(DirName, Reserved);

PSZ      DirName;      /* New directory string name */
ULONG    0;             /* Reserved (must be zero) */

USHORT    rc;           /* return code */
```

## MASM Binding

```
EXTRN DosMkDir:FAR
INCL_DOSFILEMGR EQU 1

PUSH@  ASCIIZ  DirName      ;New directory name string
PUSH   DWORD   0            ;Reserved (must be zero)
CALL   DosMkDir
```

Returns WORD
