@AuxInit

Brief

Initialize serial port

Syntax

```
@AuxInit port, settings
```

Parameters

- port (WORD) - port number
- settings (BYTE) - port settings

Baud rates is passed in the high order 3 bits as follows:

```
        000 =   110 baud
        001 =   150  ''
        010 =   300  ''
        011 =   600  ''
        100 =  1200  ''
        101 =  2400  ''
        110 =  4800  ''
        111 =  9600  ''
```

Bits 4-3 define parity:

```
        0 0      no parity
        1 0      no parity
        0 1     odd parity
        1 1    even parity
```

Bit 2 defines stop bits:

```
        0       1 stop bit;
        1       2
```

Bits 1-0 character length:

```
        1 0       7 bits
        1 1       8 bits
```

Return

- AX - port status

Bitfields for serial line status (AH):

Bit(s)	Description
7	timeout
6	transmit shift register empty
5	transmit holding register empty
4	break detected
3	framing error
2	parity error
1	overrun error
0	receive data ready

Bitfields for modem status (AL):

Bit(s)	Description
7	carrier detect
6	ring indicator
5	data set ready
4	clear to send
3	delta carrier detect
2	trailing edge of ring indicator
1	delta data set ready
0	delta clear to send
