

# 18

## Brief

Get current directory

## Input

- DL = drive number (00h = default, 01h = A:, etc)
- DS:SI → 64-byte buffer for ASCIZ pathname

## Return

- CF clear if successful
  - AX = 0100h (undocumented)
- CF set on error
  - AX = error code (0Fh) (invalid drive)

## Notes

the returned path does not include a drive or the initial backslash

many Microsoft products for Windows rely on AX being 0100h on success
